Experience in web development

As a 10th-grade student at SMKN 1 Tenganan specializing in technology, I believe that a digital presence is essential. Therefore, I decided to initiate a project to build my personal portfolio website from scratch. This project was not just an assignment; it was a medium for me to challenge my technical boundaries and express my creative vision. I aimed for a design that was sophisticated, clean, and dominated by serene blue tones.

The development process was divided into several meticulous stages. First, I conducted a research phase to find inspiration for a modern layout. I used **Figma** to draft the initial user interface, focusing on a minimalist aesthetic that avoids clutter. I wanted every element to have a purpose, from the navigation bar to the contact footer.

Second, I translated the design into a functional structure using **HTML5**. I organized the semantic tags carefully to ensure the website was accessible and SEO-friendly. For the styling, I implemented **Tailwind CSS**. This allowed me to experiment with custom color palettes and spacing. I chose a gradient of "Ice Blue" and "Slate" to maintain a professional atmosphere.

The most technical part was ensuring the **responsiveness**. I spent a significant amount of time testing the layout on various screen sizes. I also added **interactivity** using CSS transitions and simple JavaScript to make the user experience more dynamic. I paid close attention to the typography, choosing fonts that were easy to read yet stylish.

Reflecting on the process, I realized that building a website is a blend of logic and art. Completing this portfolio gave me a profound sense of accomplishment. It proved that with persistence and attention to detail, I could turn a complex idea into a functional reality. This project is a major stepping stone in my career as a future front-end developer, and I am excited to build even more advanced platforms in the future.
